

rail all-modes, K=6 — cluster profiles

day-type closure, native windows (MON/TWT/SUN to 01:00, FRI/SAT to 05:00)

median with 10-90 band; EACH DAY BLOCK SUMS TO 1 OVER ITS OWN BINS, so a step at a day boundary is the window length, not more travel (MON/TWT/SUN 28 bins vs FRI/SAT 44)
